

TM Corpus Christi Services, LP

Wastewater Solutions

For the Chemical Industry

At TM Corpus Christi Services, we are deeply committed to attentive service, regulatory excellence, and innovative solutions—all of which have established us as a leader in waste management. Our mission is to provide effective solutions that are a great value for the chemical industry and safe for the environment.

Wastewater Management for the Chemical Industry

We can handle wastewaters that present problems for on-site treatment or discharge. Typical streams managed for the chemical industry include:

- High COD water
- Alkalines
- Water with toxic organic constituents
- Water with toxic inorganic constituents
- Low- and high-pH water
- Turnaround waters

Difficult Wastewater Issues

- Hazardous and non-hazardous wastewater—deepwell injection permits allow a wide variety of waste codes and constituents.
- Large capacity to handle routine and project wastes.
- One hazardous injection well
- Cost-effective management of alkalines. No neutralization required.

Tank Clean-Outs and Sludges

- Filtered solids are managed according to applicable land disposal restrictions.
- Container processing via drums, roll-offs, or tank trucks.
- We provide turnkey, off-site services for solid and sludge management.
 - **Simplicity:** We manage liquids, solids, and sludges “as generated.”
 - **Reduced site costs:** Save the costs of service, equipment, and labor costs to dewater and solidify for additional treatment
 - **Reduced offsite costs:** Our processing capacity reduces time for waste processing and cost of box rental.

Customer Services

- Manifest preparation
- Transportation arrangements
- Scheduling
- Assistance with the profile and approval process.
- Around-the-clock (24/7) service for special projects and emergencies.
